National Safety Stand-down to Prevent Falls in Construction

Fatalities caused by falls from elevation continue to be a leading cause of death for construction employees. In fact, according to the Bureau of Labor Statistics, falls account for more than 30% of fatalities in the construction industry. Those deaths are preventable. The National Safety Stand-down raises fall hazard awareness across the country in an effort to stop fall fatalities and injuries.

As an employer, you have a duty to protect your workers from falls, and we're here to help. We have developed this toolkit to arm you with the information and resources you need to conduct a successful safety stand-down. In this toolkit you will find information about the National Safety Stand-down, toolbox talks to help prevent falls, a Construction Industry Fall Protection Safety Program, posters to help bring awareness to the stand-down and much more.

If you would like to receive this 50-page toolkit or find out more information about how you can participate and get your certificate for your participation, contact your Commercial Services Team at:
